Instructions and Directions for GEORGE FOREMAN'S KNOCK-OUT™ PRO GREEN HARD-FLOOR CLEANER

INSTRUCTIONS FOR DILUTING CONCENTRATED SOLUTION:

George Foreman's Knock-Out™ Pro Green Hard-Floor Cleaner is a low foaming formulation designed for use in hand mopping or commercial floor cleaning machines.

Do not use solution at full strength. Determine proper dilution ratio for your application and mix solution with water only. Add water slowly to reduce foaming. Refer to machine directions for safe operation and dilution of cleaning solutions.

Hand Mopping: Fill mop bucket with 4 oz. of solution per gallon of water. Water temperature should not exceed 140° Fahrenheit.

Automatic Scrubber: Fill reservoir tank with 1 oz. of solution per gallon of water. Heavily soiled floors may require 2 oz. of solution per gallon of water.

There are no toxic fumes. The finish is clean and residue free.

DIRECTIONS FOR USE:

Whether hand mopping or using an automatic scrubber, the first step is to mop the floor vigorously, using the appropriate solution. The solution should be changed when it becomes visibly dirty. After mopping, rinse floor thoroughly with water. Buff with a clean, lint-free cloth or mechanical buffer.

George Foreman's Knock-Out™ Pro Green Hard-Floor Cleaner removes dirt, grease, scum and fatty foods without harming surfaces. It will safely clean tile floors, coated hardwood floors and painted surfaces.

George Foreman's Knock-Out™ Pro Green products are safe for the user, safe on skin and will not harm clothing.
